

THE PM ARC

The PM role moves with the team: **Manual** → **Augmented** → **AI-Native**.

Same shift as the team. Different surface, same arc. What the PM stops doing is as important as what the PM starts doing.

THE UNLOCK

When the PM operates AI-Native, the team's clock changes.

Speed, autonomy, and a higher bar — earned by what the role gives up, not just by what it adds.

01

VELOCITY

Ideation to production in days, not quarters.

Co-solve replaces hand-off. The PM specifies intent upstream rather than approving drafts downstream. Cycle compression is structural, not cultural.

02

AUTONOMY

Decisions live in the team.

Blast-radius framework defaults L0 / L1 to the pod. Leadership asks for the decision and the reasoning — not the deck summarizing the research.

03

BAR

A more senior PM. Business acumen. Bias for action.

AI fluency is table stakes, not a differentiator. Hiring, review, and what "good" means all move with the role.

THE AI-NATIVE PM

more senior · more autonomous · closer to the customer · measured by business outcomes
